**Funding Scheme: Research Grants Council - Inter-institutional Development Scheme (IIDS)**

## **-Abstract-**

**智能系統於未來數碼化供應鏈**

**Intelligent Systems Ready for the Digital Future of Supply Chains**

**W**ith various governments' digitalisation strategies, the innovation of decision analytics and intelligent systems will sharpen the global operational performance of companies and make big impacts in the future of supply chains. This project aims to set up a collaboration platform using workshops, seminars and a conference for academics, practitioners and students to face the emerging challenges and opportunities for supply chain management.

In partnership between Hang Seng Management College and Shue Yan University, we have invited a number of experts from local and international universities contributing to the development of the next generation. The expected deliverables include not only the exchange of innovative ideas across institutes through seminars, but also opportunities for researchers and students to work with practitioners on application-based research projects. These activities will be integrated into a roadmap for companies and universities to collaborate on the digital future of supply chains.
